Increasing Capacity for Greenhouse Gas Project Creation and Monitoring

Ecosystems Building Capacity

Winrock is working to increase capacity for greenhouse gas project creation and implementation around the world through training activities, collaborative projects, and preparation of methods manuals and guidebooks for planning and implementing land-based carbon projects. Winrock has authored greenhouse gas emission reduction project creation and carbon methodology documents for the US Forest Service, US Department of Energy, UNDP, UN FAO, ITTO and the World Bank. Winrock-managed carbon inventories and workshops have been conducted in:

- Belize
- Bolivia
- Brazil
- China
- Chile
- Ecuador
- Guatemala
- Guinea
- Honduras
- India
- Indonesia
- Madagascar
- Mexico
- Moldova
- Panama
- Peru
- Philippines
- Republic of Congo
- Romania
- Russia
- United States

Collectively, these activities have trained more than 500 local professionals, mostly in developing countries. Workshop clients have included the World Bank's BioCarbon Fund, national and international NGOs, and private companies. Project implementers, nonprofits, government agencies, and development organizations worldwide have sought comprehensive training services from Winrock International's Ecosystems Services unit.
